### Builder

Rejected [ [Detailed](#) ] :  
943 / 100.00 %

Time per strategy [ [Detailed](#) ] :  
137 ms.

Strategies per hour:  
26 244

Running time so far:  
2 min. 9 s.

### Performance

**Performance - total cores available 24**

- Single threaded - program runs tasks sequentially, one after another. This is slower, but consumes less memory.
- Reserve 1 core for UI, compute tasks in parallel on all remaining cores.
- Custom number of cores
- Max performance - running multiple tasks in parallel, using all processor cores.

Use thread affinity

Thread affinity means that every computing threads is bound to a fixed CPU core. This should prevent thread context switching and improve the performance. The real results may wary depending on your configuration.

### Memory & disk space

Maximum memory used    GB

Don't store unfilled pending orders (Recommended)

It is usually not necessary to keep unfilled pending orders(orders that expired or were replaced). This would make the resulting strategy files smaller.

### Display

Accelerate using GPU

You have to restart the program to apply the settings.
