**Benchmark StrategyQuant speed**

This benchmark will use your actual performance settings, which is:  
**Max performance - running multiple tasks in parallel, using all processor cores.**

**Benchmark results**

Total duration (data preparation / test)	14 s. / 6 s.	Strategy avg. time (parallel)	0.10 s.
Time per tick	0.0000077041 ms.	Total ticks	13 241 836
<b>Strategies per hour</b>		<b>35 288</b>	

You can repeat this benchmark by choosing Benchmark... action in the global menu on the top right corner. Please note that benchmark runs using standardized artificial strategy and data, so its result can be compared with other installations of SQ on another computers. It is only an estimation, real backtest time depends a lot on the complexity of the strategy, timeframe and data range and precision.
